

Heaps-Trees

- insertion,
- deletion,
- sorting

Heap

- ❑ A *max tree* is a tree in which the key value in each node is **no smaller than** the key values in its children. A *max heap* is a **complete binary tree** that is also a max tree.
- ❑ A *min tree* is a tree in which the key value in each node is **no larger than** the key values in its children. A *min heap* is a **complete binary tree** that is also a min tree.
- ❑ Operations on heaps
 - ❑ creation of an empty heap
 - ❑ insertion of a new element into the heap;
 - ❑ deletion of the largest element from the heap

Figure : Sample max heaps

Property:

The root of **max heap** (**min heap**) contains the **largest** (**smallest**).

Figure : Sample min heaps

Example of Insertion to Max Heap

initial location of new node

insert 5 into heap

insert 21 into heap

Insertion into a Max Heap

INSHEAP(TREE, N, ITEM)

1. Set $N=N+1$ and $PTR=N$.
2. Repeat Steps 3 to 6 while $PTR>1$.
3. Set $PAR = \lfloor PTR/2 \rfloor$
4. If $ITEM \leq TREE[PAR]$, then:
 Set $TREE[PTR]=ITEM$, and Return.
 [End of If structure]
5. Set $TREE[PTR]=TREE[PAR]$
6. Set $PTR=PAR$.
 [End of step 2]
7. Set $TREE[1]=ITEM$
8. Return.

Example of Deletion from Max Heap

Deletion from a Max Heap

DELHEAP(TREE, N, ITEM)

1. Set ITEM= TREE[1].
2. Set LAST= TREE[N] and N= N-1.
3. Set PTR=1, LEFT=2 and RIGHT=3.
4. Repeat Steps 5 to 7 while RIGHT≤N:
5. If LAST≥TREE[LEFT] and LAST≥ TREE[RIGHT], then:
Set TREE[PTR]=LAST and Return.
[End of If structure.]
1. If TREE[RIGHT]≤ TREE[LEFT], then:
Set TREE[PTR]= TREE[LEFT] and PTR=LEFT.
Else:
Set TREE[PTR]= TREE[RIGHT] and PTR=RIGHT.
[End of If structure.]
1. Set LEFT=2*PTR and RIGHT=LEFT+1.
[End of Step 4 loop.]
8. If LEFT=N and if LAST < TREE[LEFT], TREE[PTR]= TREE[LEFT]
then: Set PTR=LEFT.
9. Set TREE[PTR]= LAST.
10. Return.

HeapSort

HEAPSORT(A, N)

1. Repeat for $J=1$ to $N-1$:
 Call INSHEAP(A, J, A[J+1]).
 [End of loop.]
1. Repeat while $N>1$:
 a) Call DELHEAP(A, N, ITEM).
 b) $A[N+1]=\text{ITEM}$.
 [End of loop.]
1. Exit.

Thank You
